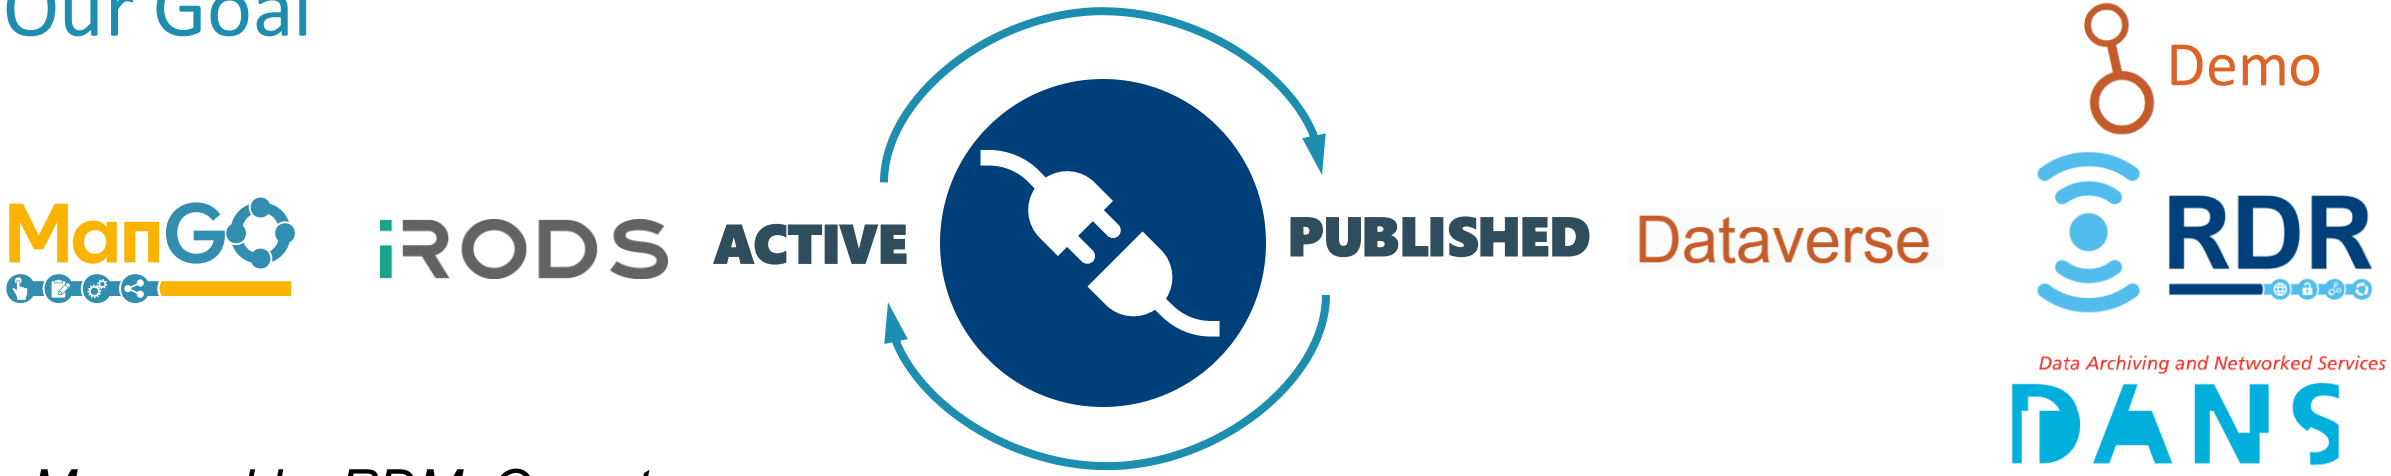
irods2dataverse: python package to deposit an iRODS dataset to Dataverse

FOZ–RDM ICTS (KU Leuven)

Speaker: Danai Kafetzaki

Our Goal



Managed by RDM, Open to users

RDM Input: Configure DV installation

```
[Demo]
dvClass = customClass.DemoDataset

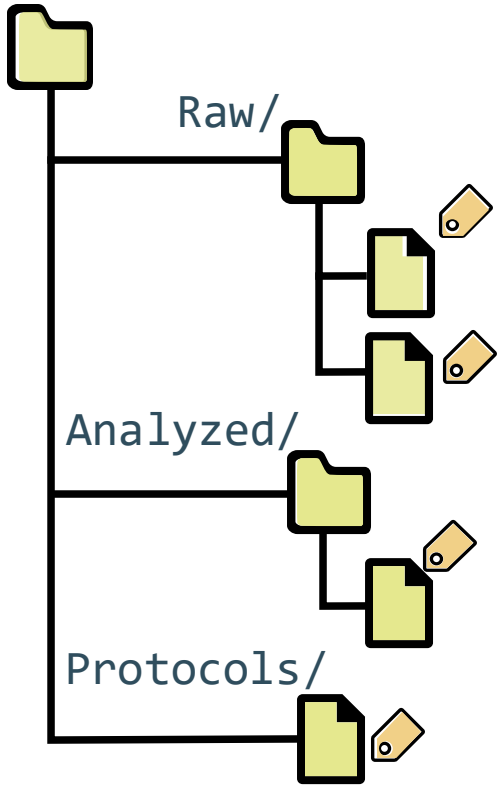
[RDR]
dvClass = customClass.RDRDataset
```

- ☑ Alias & Name
- ☑ URL
- ☑ Metadata Template

User Input

Select iRODS Dataset

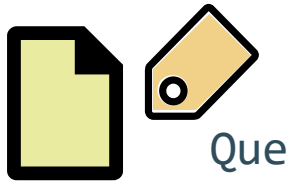
/zone/home/realm/



Specify Target Dataverse

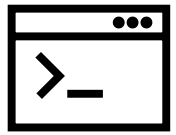
API Token

&



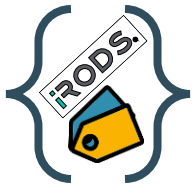
Query MD

OR



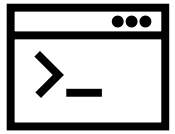
CLI

Provide Dataset Metadata



- ❑ Dataset Title
- ❑ Dataset Description
- ❑ Author information

OR



RDR

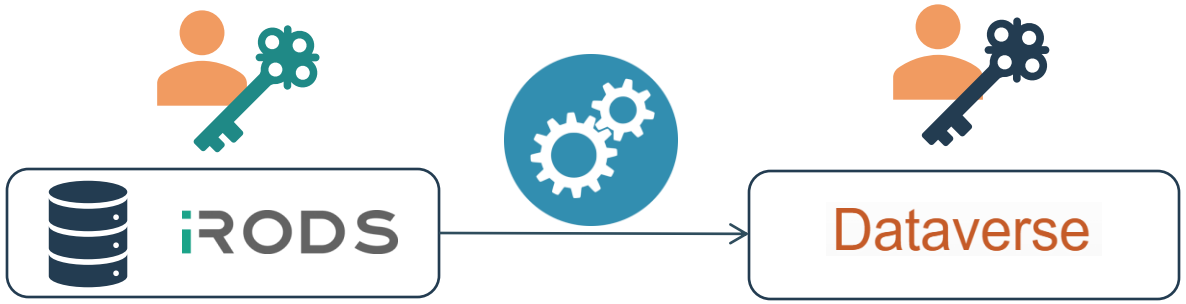
- ❑ Dataset keywords
- ❑ Access information
- ❑ File format

OR

Demo

- ❑ Subject

The process



Validate metadata

Initiate dataset deposit

Request file ID

Direct upload

Attach metadata

Open-source package

irods2dataverse 0.0.4

```
pip install irods2dataverse
```

python Package Index

kuleuven / iRODS-Dataverse

Code | Issues | Pull requests | Actions

iRODS-Dataverse Public

30-seconds demo

```
(venv) danai@CRD-L-11052:~/open_projects/testing$ python -m irods2dataverse.userScript
```
